

CUESS GENERAL MEMBER RECRUITMENT 2026

VIVA PREPARATION — QUESTIONS & NATURAL ANSWERS

Candidate: Abrar Faiyaaz

Program: BBA in Management, University of Chattogram

This guide is designed for the CUESS General Member Recruitment 2026 viva. The answers are intentionally natural and conversational, so they should be understood and adapted rather than memorized word-for-word.

Important: The recruitment notice shown in the submitted screenshot says the in-person viva is preferred. The listed offline venue is Innovation Hub, New Arts Faculty, on 12 October 2026 at 1:30 PM; the form also lists an online option on 14 October.

1. ABOUT YOURSELF

Q: Tell us about yourself.

A: I'm Abrar Faiyaaz, currently studying BBA in Management at the University of Chattogram. I'm curious, hardworking and always interested in learning new things. I particularly enjoy solving problems and taking part in quizzes because they improve my analytical and decision-making skills. My long-term goal is to become a successful entrepreneur, so I'm interested in developing practical skills in management, teamwork and entrepreneurship.

Q: Why did you choose Management?

A: I chose Management because I'm interested in how organizations work and how people, ideas and resources can be brought together to achieve a goal. I also think management knowledge will be useful if I want to build my own business in the future.

Q: What are your strengths?

A: I would say my main strengths are analytical thinking, curiosity and willingness to learn. When I face a problem, I usually try to understand the situation first instead of immediately jumping to a conclusion.

Q: What is your weakness?

A: Sometimes I spend too much time trying to make a decision or improve something because I want the result to be right. I'm working on becoming more efficient by setting priorities and deadlines.

Q: What are your hobbies or interests?

A: I enjoy football and movie series, and I also like activities that involve quizzes, problem-solving and learning something new.

Q: Where do you see yourself in five years?

A: In five years, I want to be much more experienced in management and entrepreneurship, with practical experience from projects and organizations. Ideally, I want to be moving toward building something of my own rather than only having theoretical knowledge.

2. WHY CUESS?

Q: Why do you want to join CUESS?

A: I want to join CUESS because entrepreneurship is not only about starting a business; it is also about identifying problems, taking initiative and finding practical solutions. I want to learn those skills in a real student community and work with people who are interested in entrepreneurship and startups.

Q: What do you know about CUESS?

A: CUESS stands for Chittagong University Entrepreneur and Startup Society. From the recruitment context, I understand that it is a student platform focused on entrepreneurship, startups, innovation and activities that help students develop practical skills and connections.

Q: What do you expect from CUESS?

A: I expect practical exposure, teamwork experience, networking and opportunities to learn from people who have experience in entrepreneurship. I also want to improve my communication, leadership and problem-solving skills.

Q: What can you contribute to CUESS?

A: I can contribute curiosity, analytical thinking, reliability and a willingness to work. I would be happy to help with research, event planning, idea development, content or other tasks where the team needs support.

Q: Why should we select you?

A: I don't think I should be selected simply because I want the opportunity. I think I can add value because I'm willing to learn, take responsibility and actually participate. If I join, I want to be an active member rather than just having the club name on my CV.

Q: If selected, will you actively participate?

A: Yes. I understand that being a general member means participating and contributing, not just attending a few events. I'll try to manage my academic responsibilities while staying consistent with club activities.

3. ENTREPRENEURSHIP BASICS

Q: What is entrepreneurship?

A: Entrepreneurship is the process of identifying an opportunity or problem, developing a solution, taking calculated risks and creating value through a business or venture.

Q: Who is an entrepreneur?

A: An entrepreneur is someone who identifies an opportunity or problem and takes initiative to create a solution, usually by organizing resources and accepting the risks involved.

Q: What is the difference between an entrepreneur and a businessman?

A: A businessman may operate an established business model, while an entrepreneur is often more focused on creating something new, solving a problem or finding a new opportunity. In practice, the two roles can overlap.

Q: What is a startup?

A: A startup is a young venture designed to solve a problem or serve a market, often with a business model that can grow or scale. Startups usually operate with uncertainty and test their ideas before expanding.

Q: What is innovation?

A: Innovation means creating or improving a product, service, process or business model in a way that creates useful value. It does not always mean inventing something completely new.

Q: What is the difference between an idea and a business opportunity?

A: An idea is simply a possible solution or concept. An opportunity exists when that idea solves a real problem for a specific group of people and there is a realistic way to create and capture value from it.

Q: What makes a good entrepreneur?

A: I think curiosity, resilience, adaptability, communication, decision-making and the ability to understand customers are important. A good entrepreneur also needs to learn from failure instead of being discouraged by it.

Q: Who is an entrepreneur you admire and why?

A: I admire entrepreneurs who build solutions around real problems rather than simply following trends. For example, I find people like Muhammad Yunus interesting because his work showed how a business-oriented approach can be connected with solving social and economic problems.

4. BANGLADESH & BUSINESS

Q: What are some challenges for entrepreneurs in Bangladesh?

A: Access to finance, bureaucracy, limited business knowledge, finding skilled people, market competition and building customer trust can be major challenges. Another challenge is turning a good idea into a sustainable business model.

Q: What business opportunities do you see in Bangladesh?

A: I see opportunities in areas such as digital services, education, logistics, local tourism, waste management, agri-business and services that make everyday processes easier. The strongest opportunity depends on identifying a specific problem and validating whether people are actually willing to pay for a solution.

Q: If you had to start a business in Chattogram, what would it be?

A: I would first look for a local problem instead of choosing a business just because it sounds profitable. For example, I would explore services connected to students, local delivery, tourism or small-business digitization, then interview potential customers before investing money.

Q: What problem around you would you like to solve through a business?

A: I'm interested in problems where people waste time because information or services are scattered. I would like to explore a platform or service that makes a specific everyday process simpler, but I would first research the users and test a small version.

Q: Why do many startups fail?

A: Common reasons include solving a problem that customers do not care enough about, poor cash management, weak teamwork, bad execution, lack of market research and scaling too early. A good idea alone is not enough.

Q: What is more important: money or a good idea?

A: Neither is enough by itself. A good idea needs execution, and execution needs resources. If I had to prioritize at the beginning, I would focus first on solving a real problem and validating the idea before spending a lot of money.

Q: Can a business be successful without innovation?

A: Yes, a business can succeed with an existing model if it executes better, serves a specific market or provides better value. However, continuous improvement and adaptation are important for long-term success.

5. SITUATION-BASED QUESTIONS

Q: Suppose you have a business idea but no money. What would you do?

A: I would not immediately look for a large investment. First I would validate the problem, talk to potential customers and build a simple minimum version if possible. If the idea shows demand, then I could consider bootstrapping, partners, competitions, grants or investment.

Q: Suppose your team members disagree with your idea. What will you do?

A: I would first listen to their reasons instead of treating disagreement as opposition. We could compare the ideas using evidence, customer needs and feasibility. If their idea is better, I should be willing to change my position.

Q: If you are given Tk. 10,000 to start a business, what would you do?

A: I would choose a low-cost service rather than spending the whole amount on inventory. I would first identify a small customer group, test the service, keep a record of costs and revenue, and reinvest only if the test shows demand.

Q: Suppose your startup fails. What will you do?

A: I would identify why it failed, separate emotional disappointment from the actual lessons, and document what I learned. If the problem is fixable, I would improve the model; if not, I would use the experience to build a better idea.

Q: If your team leader makes a wrong decision, would you challenge them?

A: Yes, but respectfully. I would explain my concern with evidence and suggest an alternative. Once the team makes a final decision, I would support the team unless there is a serious ethical or safety issue.

Q: What would you do if a teammate doesn't do their work?

A: I would first talk to them privately to understand the reason. If possible, I would help redistribute or clarify the work. If the problem continues and affects the project, I would inform the team leader rather than letting the whole team suffer.

Q: Are you a leader or a team member?

A: I can work as both. Leadership is not always about having the title; sometimes the best contribution is supporting the team and doing your part properly. If the situation requires me to take initiative, I'm comfortable doing that.

Q: How do you handle criticism?

A: I try to separate the criticism from my ego. If the criticism is valid, I use it to improve. If I disagree, I would still listen and explain my reasoning respectfully.

6. TEAMWORK & PERSONALITY

Q: Are you comfortable working in a team?

A: Yes. I think teamwork is important because different people bring different perspectives and skills. I'm comfortable sharing ideas, listening to others and taking responsibility for my part.

Q: Tell us about a time you solved a problem.

A: A simple example is when I face a difficult academic or practical problem. My approach is to break it into smaller parts, identify what information I'm missing, compare possible solutions and then choose the most practical one. I prefer explaining the process rather than guessing.

Q: How do you deal with conflict?

A: I try to focus on the issue rather than the person. I listen to both sides, identify the actual point of disagreement and look for a solution that helps the team achieve its objective.

Q: Can you manage academics and club activities together?

A: Yes. I would manage them through priorities and deadlines. Academics remain important, but I also understand that club work requires commitment. I would avoid taking responsibilities that I cannot realistically complete.

Q: What would you do if you were given a task you don't know how to do?

A: I would first try to understand the task and research the basics myself. If I still need help, I would ask someone with experience rather than wasting time pretending I know it. Then I would complete the task and learn the process for future work.

7. TRICKY / PRESSURE QUESTIONS

Q: You said you are interested in entrepreneurship. Have you actually started a business?

A: Not yet. I don't want to claim experience I don't have. I'm interested in entrepreneurship, and one reason I want to join CUESS is to gain practical exposure and learn how to turn ideas into real projects.

Q: Why CUESS instead of another club?

A: CUESS is directly connected to an area I want to develop—entrepreneurship and startups. Since I'm studying Management and my long-term goal is entrepreneurship, I think the environment is relevant to what I want to learn.

Q: What if you don't get selected?

A: I would be disappointed, but I would not stop learning about entrepreneurship. I would try to improve the areas where I was weak and look for other ways to gain practical experience.

Q: What is one thing you can improve about yourself?

A: I want to become more confident and efficient when communicating ideas, especially in unfamiliar situations. I'm working on that by putting myself in situations where I have to explain and defend my ideas.

Q: Convince us in 30 seconds that we should select you.

A: I'm not going to claim that I'm the most experienced candidate. What I can say is that I'm genuinely interested, willing to learn and ready to work. If selected, I want to contribute to the team, learn from the people around me and make my membership meaningful rather than just adding another name to my CV.

8. QUICK-FIRE QUESTIONS

Q: What is your biggest goal?

A: To become a successful entrepreneur while continuously developing my skills and experience.

Q: Risk or security?

A: Calculated risk. Entrepreneurship requires risk, but it should be based on information rather than impulse.

Q: Money or impact?

A: Ideally both. A sustainable business should create real value and also be financially viable.

Q: Leader or follower?

A: Both when appropriate. I can lead when initiative is needed and follow when someone else has better expertise.

Q: Failure or regret?

A: Failure. Failure can teach you something; regret often comes from not trying.

Q: One word that describes you?

A: Curious.

Q: What motivates you?

A: Learning, improvement and the satisfaction of solving a difficult problem.

Q: What is more important in a team: talent or reliability?

A: Both matter, but reliability is essential because a talented person who cannot be depended on can hurt the whole team.

Q: What would you do if you had unlimited money?

A: I would invest in businesses and projects that solve meaningful problems, but I would still validate ideas before putting resources into them.

Q: Do you have any questions for us?

A: Yes. I'd like to know what kind of responsibilities and learning opportunities general members usually receive during their first few months.

VIVA DELIVERY TIPS

- Keep most answers around 20–45 seconds unless they ask for more detail.
- Do not memorize every sentence. Remember the main idea and speak naturally.
- If you do not know something, say so honestly and explain how you would find the answer.
- Maintain eye contact, sit upright and speak clearly. A short confident answer is better than a long confused one.

- For situation questions, use this structure: understand the problem → gather information → discuss → decide → act → learn.
- Do not exaggerate your experience. Interviewers can usually tell when an answer is artificial.
- For 'Why CUESS?', connect your answer to entrepreneurship, management, teamwork and practical learning.

Final reminder: The best viva answer is not the most sophisticated answer. It is an honest, clear answer that shows how you think.
